

# Build Safer, Sustainable Structures. Build A Better Tomorrow.

Today, sourcing safe and sustainable components for modern-day structures is crucial in building a better and greener tomorrow. **Made in Malaysia** High-Damping Natural Rubber Bearings (HDNRB) are the cost-effective, maintenance-free, and environment-friendly way to safeguard lives and property. The HDNRBs are made from natural rubber and effectively protect structures, occupants, and the contents of the buildings from earthquake damage by significantly reducing higher mode responses in structures. Malaysian manufacturers have technical knowledge and experience, coupled with modern manufacturing and certified testing facilities to ensure the rubber bearings meet international standards and requirements. When it comes to rubber, **No One Knows Rubber Like Malaysia Does.**
