MALAYSIA:

Your No. **1** Source For Quality Rubber Gloves

Why Choose Malaysian Rubber Gloves?

Established Reputation

For more than a hundred years, Malaysia has been a major producer of natural rubber. Today, Malaysia is the world's largest exporter of medical gloves made from natural and nitrile rubbers. Malaysian rubber gloves are exported to more than 150 countries with the USA and the European Union (EU) being the country's top export destinations.

Research and Development Support

Technical and research and development (R&D) support from the Malaysian Rubber Board (MRB) and the Tun Abdul Razak Research Centre (TARRC) in the United Kingdom ensures continuous improvement in rubber glove production by Malaysian manufacturers. Malaysia has introduced the Standard Malaysian Glove (SMG), a product quality certification scheme that provides assurance of quality for low-protein examination gloves that are lightly powdered or powder-free.

International Standards

As the world leader in medical gloves, Malaysian manufacturers produce top quality rubber gloves that are competitively priced and meet international standards. Rubber gloves from Malaysia conform to international standards such as the ASTM, ISO and EN.

Modern Manufacturing Facilities

Rubber glove manufacturers in Malaysia have invested substantially in state-of-the-art manufacturing facilities to enhance production efficiency and meet the growing demand for rubber gloves. Over the years, more and more rubber glove manufacturers in Malaysia are moving towards more energy efficient manufacturing plants, including the use of biomass technology.

Product Variety

Malaysian manufacturers are offering a wide range of gloves, including examination, surgical, clean room, household, industrial and high risk gloves. These gloves could be customized to meet your requirements based on size, shape, thickness, colour and packaging.
