40% of the total project cost of RM111,627.36

**COMPLETION DATE**

**September 2022**

**PROJECT ACHIEVEMENTS**

**30%**

Reduction in manpower required for the packing and sealing process.

**RM400,000**

Estimated annual savings from manpower cuts.

### FAGT SUCCESS STORIES

## Advancing Through Automation

One of Malaysia's leading rubber product exporters have successfully implemented automation of key processes to elevate productivity, optimise manpower and capture substantial cost savings. This in turn supports their efforts to strengthen business continuity and resilience for long term sustainability.

Sumirubber Malaysia, a leading manufacturer for a variety of premium

quality gloves and rubber products, opted to automate its packing processes. By doing so, it was able to reduce manpower needs by 30% from 12 persons working manually to just eight persons, and two packing machines post-automation to produce 14,000 pairs of gloves daily, for sizeable annual savings of RM400,000 (depending on the size of the production order).
